

CORPORATE OVERVIEW

(Renamed from Cyclone Computers on Nov 1, 2007)

The expertise of Connected Platforms, a Nevada corporation, lies in the smart, cost-effective, and optimal delivery of outsourced, technology-related services.

Connected Platforms provides clients with a wide range of IT network installation and administrative services, including network architecture, planning, maintenance, and long-term support. From responding to an immediate crisis or ensuring data protection and security — to conducting network assessments and assuming full responsibility for network administration — Connected Platforms uses its extensive expertise to help clients better focus on their core business strengths and strategies.

Connected Platform's market focus is on small and medium businesses, which typically have few internal staff devoted to this function. While the vast majority of clients are not technology-focused, they heavily rely on the dependability and integrity of their networks for the success and performance of their enterprises.

Connected Platforms was established in 1994, and 5 times has been named the "#1 hardware/technology provider" in SW Washington as reported by the *Vancouver Business Journal's* yearly "Book of Lists." From April, 2005 until August 2007 it was a separate business unit of Hepieric, Inc., and operates out of its location in Vancouver, Washington. In September 2007 Connected Platforms formally was spun off from our former parent company Hepieric, Inc.

Connected Platforms has recently expanded our expertise in the Linux arena via acquiring Prescient Software and are looking forward to better serve our clients with mixed IT environments.

Contact Connected Platforms today to find out how you can improve the return on investment on your IT investments and gain more time for your core business.
